At a glance:

**VEKA Umwelttechnik GmbH**

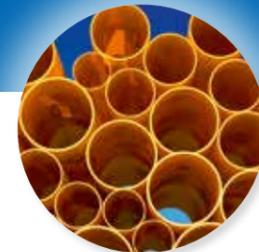

- Operational: Since 19 November 1993
- Site: 120,000 m<sup>2</sup>
- Workforce: 110
- Silo capacity: 2,000 tons
- Purity of recycled PVC-U: almost 100%
- Plant capacity: 50,000 tons/year
- Additional facilities in the UK and France

WITH THE FUTURE IN MIND:  
.....  
**TOP-QUALITY RECYCLED  
PVC-U PELLETS**

# VEKA Umwelttechnik: with the future in mind

Europe's largest and most modern recycling facility for PVC-U windows, doors, shutters and profiles is located at the heart of Germany in Behringen, Thuringia. Its excellent infrastructure makes it the optimum location from which to supply our partners. The group's strategy is likewise coordinated from this location.

There are many reasons for using top-quality recycled pellets in the manufacture of products made of PVC-U. Firstly, natural resources are limited – raw materials are in even shorter supply and are therefore becoming more expensive. Secondly, sustainable environmental and climate protection is growing in significance.

The eco-friendly use of recycled pellets helps companies to fulfil their obligations in terms of environmental protection – plus it can enhance their image. After all, the CO<sub>2</sub> emissions incurred during production are significantly lower than for goods made from new PVC-U. The so-called carbon footprint, in other words, the CO<sub>2</sub> output, is automatically multiple times lower for companies using recycled rather than new PVC-U! Products manufactured in such an eco-friendly way also more readily fulfil the criteria of 'green procurement' – the environmentally conscious procurement policy of public authorities and increasingly also of the private sector.

## Consistency pays off: PVC-U pellets since 1993

VEKA Umwelttechnik GmbH has made a name for itself as a strong and reliable manufacturer of top-quality PVC-U pellets – with TÜV certification! Our almost completely pure, cleanly sorted recycled pellets meet the highest quality demands and the fields of application are therefore nearly unlimited: almost anywhere where quality products made of PVC-U are produced, VEKA Umwelttechnik pellets are the first choice. Our many years of experience and efficient logistics make VEKA Umwelttechnik GmbH, along with its subsidiaries in the UK and France, a strong and reliable partner in the PVC-U industry.

## An asset for business and the environment: recycling pays off

The top-quality PVC-U pellets from the VEKA Recycling Group offer companies from various industries numerous competitive advantages:

- With VEKA recycled pellets you are contributing to environmental and climate protection
- In the production of our pellets, much less CO<sub>2</sub> is emitted than during new production, thus improving the carbon footprint of your products
- Green procurement requirements, i.e. the consideration of environmental factors in procurement, are thus fulfilled

- The pellets can be produced to various grades of quality, depending on the requirements
- Numerous fields of application, e.g. window profiles, shutters, construction and furniture profiles, cable conduits, wall panels, pipes, etc.
- The VEKA Recycling Group is your strong partner with many years' experience, efficient logistics and several European locations

As early as 1997, VEKA Umwelttechnik GmbH became the first TÜV-certified specialist for the disposal of PVC-U windows. Our sustainable disposal concept sets the standards Europe-wide – and provides our partners with valuable competitive advantages.
